Underlined names are OBJECTIVE synonyms (as in exactly the same type specimen or type species). Items in blue (others) are so-called subjective synonyms, but based on second authors taxonomic diagnosis are one and the same taxon as earlier items on right, meaning oldest available names must be used. Items in blue typically include specimens from same location and collection series and/or extremely closely related species if genus, with later authors typically lifting important diagnostic material from earlier authors papers (mainly uncited or alternatively derided, but bootlegged).

About half the junior synonyms have NOT been recorded in Zoobank (ICZN Repository) as of end May 2022 and many of the others are incompletely listed. All senior Hoser names (most on this list) have been fully recorded in Zoobank at time of original publication since inception of Zoobank (ICZN), and also recorded on publication and archived at Zoological Record, National Library of Australia, Natural History Museum, UK, etc, and fully comply with rules of the in force *International Code of Zoological Nomenclature*.
